

Supplemental Figure 2: Logistic Regression P–Values per Cohort

We performed logistic regression on each cohort to determine the p-values for rs1049296, rs1800562, and the epistatic interaction of these variants. Each cohort is shown on the x-axis, and the p-value for each cohort is shown on the y-axis. The red line indicates the alpha value of 0.05. From our analysis, only the ACT and WASHU cohorts have significant p-values at these variants.
